SmartStart™ semi-moist feed

Combining nutrition and hydration in a single feed formulation

Benefits

The semi-moist SmartStart™ feed provides the optimal combination of nutrients and water to support the chicks' gut health, metabolism and immune systems. Formulated with a scent and colour that chicks find appealing, SmartStart™ feed performs well in the warm conditions of the hatcher and provides a safe, convenient and hygienic feeding solution.

How it works

Semi-moist feed

- Soft crumble feed with high water content
- Combining nutrition and hydration in a single feed formulation
- Based on a proven starter feed
- Containing easily digestible lipids, proteins and carbohydrates to provide the new-born chick with essential nutrients for growth and development
- Attractive fragrances and red-coloured ingredients, easy for the chicks to find
- Fixed feed : water ratio prevents gut-health problems caused by excessive water consumption
- Added preservatives and water-binding agents control microbial quality

Natural Deep Eutectic Solvents (NADES)

- A patented, nutritional compound that retains water in the semi-moist feed
- Hygroscopic and stable composition locks-in water naturally
- First discovered in seeds of desert plants
- Made from natural sugars mixed with small amounts of vitamins and water
